

## **ABSTRACT**

### **Method of removing a biofilm**

The present invention relates to a method of removing a biofilm, which comprises at least the following steps, carried out simultaneously or consecutively:

a) a solution comprising an enzyme mixture containing at least one enzyme chosen from the group of proteases, at least one enzyme chosen from the group of esterases and an amylase is prepared;

b) a solution comprising a detergent with an alkaline pH is prepared; and

c) said solutions are applied, by washing or by circulation, to the surface to be treated.

It also relates to a kit intended for removing a biofilm, which comprises the solutions defined above and the compositions comprising the said solutions.
